

🎓 Education

|                     |                    |                                 |        |
|---------------------|--------------------|---------------------------------|--------|
| Sep 20XX - Jun 20XX | Example University | Computer Science and Technology | M.Eng. |
| Sep 20XX - Jun 20XX | Example University | Software Engineering            | B.Eng. |

💼 Internship Experience

|                   |                                            |                 |
|-------------------|--------------------------------------------|-----------------|
| 20XX.XX - 20XX.XX | Example Tech Company - Infrastructure Team | Backend / Infra |
|-------------------|--------------------------------------------|-----------------|

Worked on the development and performance optimization of a core system, covering requirement analysis, solution design, implementation, deployment, and stability improvement.

- 1. Designed and implemented a refactoring plan for a key module, improving maintainability, extensibility, and iteration efficiency.
- 2. Optimized performance bottlenecks on critical paths using caching, asynchronous processing, batching, and other engineering techniques.
- 3. Improved monitoring, alerting, exception handling, and automated tests to enhance service stability and troubleshooting efficiency.

|                   |                                                      |                   |
|-------------------|------------------------------------------------------|-------------------|
| 20XX.XX - 20XX.XX | Example Internet Company - Platform Engineering Team | Backend Developer |
|-------------------|------------------------------------------------------|-------------------|

Participated in backend development for a platform service, including API design, data modeling, business workflow implementation, and online issue resolution.

- 1. Implemented core business APIs and admin capabilities to support end-to-end business workflows.
- 2. Participated in database schema design and query optimization to reduce latency and resource usage in complex scenarios.
- 3. Collaborated with product, frontend, and QA teams to deliver iterations, gray releases, bug fixes, and post-release reviews.

🔬 Research Experience

|         |                                |                                     |
|---------|--------------------------------|-------------------------------------|
| 20XX.XX | Paper Title / Research Project | Conference / Journal   Author Order |
|---------|--------------------------------|-------------------------------------|

Conducted research in systems, algorithms, or applications. Add the research background, problem definition, and key contributions here.

- 1. Responsible for literature review, method design, experiment implementation, result analysis, and paper writing.
- 2. Add quantitative results, comparison experiments, open-source code, patents, or other research outputs here.

🔗 Open Source Experience

|                   |                                         |             |
|-------------------|-----------------------------------------|-------------|
| 20XX.XX - Present | Open Source Project / GitHub Repository | Contributor |
|-------------------|-----------------------------------------|-------------|

Maintained or contributed to open-source projects. Describe the project scope, tech stack, and personal contributions here.

- 1. Submitted feature PRs, fixed issues, or optimized core modules to improve performance, stability, or usability.
- 2. Improved documentation, tests, and examples to help new users onboard and enhance community collaboration.

🛠 Skills

Solid computer science fundamentals and engineering experience. Replace the following placeholders with skills relevant to the target role.

- 1. **Programming & Engineering:** Python, C++, Go, Java, Linux, Git, CI/CD, and engineering best practices.
- 2. **Backend & Infrastructure:** Distributed systems, databases, caching, message queues, microservices, performance optimization, and reliability engineering.
- 3. **Algorithms & Systems:** Data structures and algorithms, operating systems, computer networks, machine learning fundamentals, and related project experience.
